The screenshot shows a configuration window with the following fields and controls:

- commitFrequency**: A text input field.
- OutputExpireFile**: A button with a circular icon.
- SQL Query**: A large text area containing:

```
{sql-select}  
"out1"  
"SELECT run_date, autditcode, productgroup, 0 AS capex  
'({^Product group code^})'({^Network element^})_CNT'  
}
```
- DBInterface**: A dropdown menu showing 'oci'.
- DBUser**: A text input field showing 'lst1 dev'.
- DBPassword**: A text input field showing 'XXXXXX'.
- DBService**: A text input field showing 'lst'.
- Enabled**: A checkbox.
- Output**: A dropdown menu showing 'Output'.
- Default**: A dropdown menu showing 'Default'.
- Output**: A dropdown menu showing 'Output'.

Fig. 11

The screenshot shows a software window titled "BRE Node - querydump". Inside the window, there is a "Process Node Name" field containing the text "querydump". To the right of this field is a "Type" dropdown menu, also set to "querydump". Below the "Process Node Name" field are several buttons: "Rename", "Add Input", "Add Output", "Declare Parameters", "Custom Documentation", and "Notes". Below these buttons are four vertical input fields labeled "DBUser", "DBPassword", "DBService", and "DBInterface". To the right of these fields is a "Query File" button. A large, empty rectangular area occupies the right side of the window. Arrows from labels 1110 and 1120 point to the "DBPassword" field and the large empty area, respectively.

Fig. 14

The screenshot shows a software window titled "BRE Node: cat". It contains several tabs: "Process Name: cat", "Add Input", "Add Output", "Declare Parameters", "Custom Documentation", and "Notes". The "Process Name: cat" tab is active, showing a large text area for "stripHeaders" and a "caType" dropdown set to "union". Below this are three input/output sections, each with a "File:" field, a "Columns:" field, and a "Remove" button. The first section is for "Input Name: in1", the second for "Input Name: in2", and the third for "Output Name: out1". Each section also has a "View" button. Annotations with arrows point to the "stripHeaders" field, the "caType" dropdown, and the "Remove" button of the first input section. Three text boxes provide descriptions for these elements.

Annotations and their descriptions:

- Enter "true" to remove headers from output
- "union", keeps duplicate rows, "exact" gets rid of duplicates
- Lists the inputs and outputs of the node
